## Technical articles

### Volume 38, 1965

## Technical articles

### A

**ADVANCED TECHNOLOGY**

Bright hopes for display systems: flat panels and light deflectors p. 56 Nov. 29
Computing at the speed of light p. 72 Sept. 6
Controlling laser oscillation p. 101 Sept. 20
Light on the laser's future p. 119 Apr. 19
Monkeys and microelectronics p. 90 Feb. 22
More power to the laser—with Q switching p. 91 Oct. 18
New target for radar: sharper vision with optics p. 58 Dec. 27
Switching with light p. 58 Nov. 1

**AMPLIFIERS**

Amplifier gain is constant despite changes in load p. 75 June 28
Cascode amplifier stabilized by reducing internal feedback p. 70 May 17
IC's improve differential amplifiers—and vice versa p. 75 Aug. 9
Simple circuit tunes audio amplifier p. 84 Mar. 22
Stable differential amplifier designed without choppers p. 73 Jan. 25

**ANTENNAS**

Antenna's reflecting surfaces increase beacon bandwidth p. 77 Jan. 11
Making the antenna an active partner p. 93 Aug. 9
Transmitters towed through air test antenna's radiation pattern p. 96 Oct. 18
Very low frequency antennas are going back to work p. 80 Jan. 11

**AVIONICS**

Data dots identify aerial photos p. 106 Sept. 20
Low light tv sees in the dark better than the human eye p. 78 June 28

### C

**CIRCUIT DESIGN**

Adding a component reduces recovery time p. 78 Jan. 25
Cold-cathode tubes as triggers p. 76 Apr. 5
Designing transmission lines into multilayer circuit boards p. 90 Nov. 1
Feedback: perils and potentials in designing integrated circuits p. 67 May 31
FET performs well in balancing act p. 88 Sept. 20
Filter design easy as pi p. 93 Sept. 20
Impedance matching with nonlinear loads p. 82 Feb. 22
Magnetoresistors isolate load from control circuit p. 60 Feb. 8
Modified decade counter eliminates components p. 74 Dec. 13
Modified flip-flop quadruples fan-out p. 67 Dec. 27
Modulated pulse width converted to analog voltage p. 99 Oct. 4
Multi's output duration controlled by input p. 88 Feb. 22
Multivibrator provides bidirectional output pulses p. 87 Aug. 23
Negative resistance in FET's: an aid or an ailment p. 57 July 26
New look at coaxial cavities for varactor multipliers, A p. 56 May 17
New ways to improve transistor bias stability p. 87 Feb. 22
Nomograph and chart pinpoint source of ripple voltage limitation p. 64 Sept. 6
Nonreactive filter converts triangular waves to sines p. 96 Mar. 8
Novel sweep circuit eliminates ramp pedestal p. 68 Dec. 27
One discriminator senses pulse width and height p. 90 Apr. 19
One-transistor multi delays digital pulses p. 85 Aug. 23
Phase demodulator needs no tuning p. 99 Oct. 4
Photocell triggers counting circuit p. 74 June 28
Precise 6-volt input triggers circuit p. 80 July 12
Pulse generator circuit doubles as modulator p. 91 Apr. 19
Pulse generator controls rise, fall time independently p. 98 Sept. 20
Pulse width converted to pulse sequence p. 86 Feb. 22
Pulses with variable mark-to-space-ratio p. 78 July 12
Quick-on-the-trigger design p. 105 June 14
Reduced loading improves accuracy of cascaded pots p. 110 Nov. 15
Reliable repertoire of display circuits p. 60 Jan. 25
Remotely tuned crystal filter eliminates tuned transformer p. 113 Nov. 15
Retrieving data from Gemini p. 83 May 3
R-f switching matrix cuts out crosstalk p. 67 Nov. 1
Rise time adjustment independent of fall time p. 76 Jan. 25
Sawtooth generator uses FET as constant current source p. 87 Sept. 6
Scr monitors power failure p. 63 July 26
Scr multivibrator switches reliably p. 95 Mar. 8
Scr's regulate a-c line voltage p. 61 Feb. 8
Scr ring counter switches up or down p. 84 Sept. 6
Scr switch turns off with reverse bias p. 88 Apr. 5
Short-circuit protection consumes little power p. 68 Nov. 1
Silicon controlled switch can generate pulses p. 79 Jan. 25
Sharp discrimination of voltage differences p. 97 Sept. 20
Simple circuit increases measurement accuracy p. 69 Nov. 1
Simple diodes keep voltages constant p. 68 Sept. 6
Simple multivibrator operates at 5 Mc p. 86 Aug. 23
Six possible routes to noninductive tuned circuitry p. 114 Nov. 15
Slow sweep generator controls camera shutter p. 82 Aug. 9
Simple circuit tunes audio amplifier p. 84 Mar. 22
Stable differential amplifier designed without choppers p. 73 Jan. 25
Timing circuits control relays p. 85 Mar. 22
Transistor circuit pulses 1,000 volts p. 86 Sept. 6
Transistor switch passes current both ways p. 79 Jan. 11
Triangle generator adjusts output slopes and peaks p. 85 June 14
Triangular waveforms have 1% linearity p. 86 Apr. 5
Tunnel diode sensor protects regulator from short circuit p. 75 Dec. 13
Two transistors simulate high-current tunnel diode p. 63 Feb. 8
Unijunction transistor latches relay with short pulses p. 62 May 3
Unijunction transistor turns off latching relay p. 109 Nov. 15
Using cold-cathode tubes to count and store p. 80 Apr. 19
Variable damper impedance improves tv scan linearity p. 90 Oct. 18
Zener diode protects backward wave oscillator p. 65 Nov. 29
Zero-crossing detector provides fast sync pulses p. 91 Apr. 19

**COMMUNICATIONS**

Antenna's reflecting surfaces increase beacon bandwidth p. 77 Jan. 11
Army lays the groundwork for satellite communications p. 86 May 31
Capsule is no isolation booth, The p. 88 May 3
Coding for error control: an examination of techniques p. 70 Dec. 27
Detector circuit measures phase and amplitude p. 84 June 14
Electronic variable attenuator for use with uhf receivers, An p. 97 June 28
Error-control systems get the message across p. 125 Nov. 15
Finally, the armed forces get solid state communications p. 63 May 3
Foil and styrofoam polarize radar beam p. 75 May 31
Laser-television system developed with off-the-shelf equipment p. 75 Feb. 8
Making the antenna an active partner p. 93 Aug. 9
Messages by meteor p. 102 Oct. 18
More and faster communications p. 122 Apr. 19
Navigational satellites: beacons for ships and planes p. 79 Feb. 8
Protecting digital transmission with optical matched filters p. 76 May 17
Retrieving data from Gemini p. 83 May 3
R-f switching matrix cuts out crosstalk p. 67 Nov. 1
Shortcut to calculating the Q p. 85 July 12
Suppressing noise at the connector p. 65 May 17
Telemetry that's compact and reliable p. 77 May 3
Very low frequency antennas are going back to work p. 80 Jan. 11

**COMPONENTS**

Broader choice of components for silicon integrated circuits, A p. 48 May 3
Cold-cathode tubes as triggers p. 76 Apr. 5
Continuously variable delay line for frequencies below 100 Mc p. 73 May 31
Detonators that tune out stray r-f p. 76 May 31
Flat disks reduce the cost of making cathode-ray tubes p. 113 Apr. 5
Inductors that fit integrated circuits p. 62 May 31
Light-coupled semiconductor switch for low-level multiplexing p. 54 Feb. 8
Magnetoresistors isolate load from control circuit p. 60 Feb. 8
New look at coaxial cavities for varactor multipliers, A p. 56 May 17
Picking the right potentiometer p. 78 June 14
Scr's regulate a-c line voltage p. 61 Feb. 8
Solid state multipliers for servosystems p. 120 Nov. 15
Suppressing noise at the connector p. 65 May 17
10,000 volt d-c latching relay achieved with reed switch p. 64 Nov. 29
Thin-film capacitance elements: which is best for your purpose? p. 67 Jan. 25
Using cold-cathode tubes to count and store p. 80 Apr. 19
Using the cold-cathode tube: Part 1 p. 78 Mar. 22
What's new in semiconductor emitters and sensors p. 98 Nov. 15
Wideband tape-recorder users claim obsolete standards impede technology p. 90 Jan. 25

**COMPUTERS**

After a lull, numerical control is in demand p. 106 Dec. 13
Automatic test equipment: a million-dollar 'screwdriver' p. 88 Aug. 23
Campus computer helps students do their homework at Dartmouth p. 85 Nov. 29
Computer approach for people who know nothing about computers, A p. 83 Nov. 29
Computer trio runs the works at big British steel mill p. 80 Jan. 25
Computers design the layout: Part III p. 88 Nov. 1
Computers for the electric utility industry p. 124 Apr. 19
Computing at the speed of light p. 72 Sept. 6
From war gear to coal mines p. 93 Mar. 22
IBM's flexible addition to System 360 p. 79 Nov. 29
Manual process control makes way for computers p. 110 Dec. 13
Packaging revolution, The, Part IV: Bigger, better multilayer boards p. 90 Nov. 29
Solid state multipliers for servosystems p. 120 Nov. 15
Time-sharing: one machine serving many masters p. 72 Nov. 29
Who's on the right track? p. 71 July 26

**CONSUMER ELECTRONICS**

Colorful, faithful, easy to operate: goals for an all-European tv system p. 97 Mar. 22
From Japan, a startling new color tv set p. 81 May 31
Satellite computers as interpreters p. 87 Nov. 29
Solid state stereo set built in modules, A p. 88 Aug. 9
Wonderland for the consumer, A p. 109 Apr. 19

### D

**DESIGNER'S CASEBOOK**

Amplifier gain is constant despite changes in load p. 75 June 28
Antenna's reflecting surfaces increase beacon p. 77 Jan. 11
Bipolar limiter reduces d-c loss p. 65 Nov. 29
Bipolar pulse detector features meter display p. 63 Nov. 29
Cascode amplifier stabilized by reducing internal feedback p. 70 May 17
Chopper adapts voltmeter to d-c p. 66 Nov. 1
Circuit inverts d-c voltage p. 100 Sept. 20

Circuit keeps voltage constant for welder battery p. 88 Oct. 18
Clamp and spark gap protect twt modulator p. 64 July 26
Continuously variable delay line for frequencies below 100 Mc p. 73 May 31
Controlling scr firing angle regulates d-c load voltage p. 80 Aug. 9
Crystal accurately controls avalanche pulse generator p. 112 Nov. 15
Darlington maintains constant unity gain p. 69 Nov. 1
Detector circuit measures phase and amplitude p. 84 June 14
Diode eleminates multivibrator bias p. 62 Feb. 8
Diode quiets input to monostable multi p. 99 Sept. 20
Diodes protect meter from overloads p. 85 Sept. 6
Duty cycle is constant at any trigger frequency p. 62 July 26
Electronic capacitor is continuously variable p. 89 Oct. 18
Electronically tuned hybrid notch filter p. 92 Mar. 8
Feedback system detects 1% amplitude difference p. 68 May 17
FET circuit stores light measurement p. 66 Nov. 1
FET circuit stretches 1-msec pulse to 30 hours p. 87 Apr. 5
FET in bridge circuit gates a 300-kc signal p. 60 May 3
FET increases Schmitt trigger input impedance p. 65 July 26
Foil and styrofoam polarize radar beam p. 75 May 31
Forming accurate dividers with nonprecise resistors p. 100 Oct. 4
Gate circuits eliminated in scr static switch p. 80 July 12
Gated multivibrator output provides constant pulse width p. 69 Dec. 27
Grounded-grid circuit sweeps better than Miller or bootstrap p. 83 Mar. 22
Improving Darlington speed p. 83 Aug. 9
Isolating transistor improves one-shot p. 76 Dec. 13
Local feedback improves transistor characteristics p. 108 Nov. 15
Low-cost adjustable regulator consumes little power p. 109 Nov. 15
Low-cost Schmitt trigger reduces hysteresis p. 63 Nov. 29
Magnetoresistors isolate load from control circuit p. 60 Feb. 8
Matching gate potential to FET pinchoff voltage p. 81 Aug. 9
Modified decade counter eliminates components p. 74 Dec. 13
Modified flip-flop quadruples fan-out p. 67 Dec. 27
Modulated pulse width converted to analog voltage p. 99 Oct. 4
Multi's output duration controlled by input p. 88 Feb. 22
Multivibrator provides bidirectional output pulses p. 87 Aug. 23
New ways to improve transistor bias stability p. 87 Feb. 22
Novel sweep circuit eliminates ramp pedestal p. 68 Dec. 27
Off-the-shelf ic's in timer p. 70 Dec. 13
One discriminator senses pulse width and height p. 90 Apr. 19
One-transistor multi delays digital pulses p. 85 Aug. 23
Phase demodulator needs no tuning p. 99 Oct. 4
Photocell triggers counting circuit p. 74 June 28
Photoconductors chop d-c signal levels p. 61 May 3
Photodetector gain control aids signal discrimination p. 111 Nov. 15
Photodiodes control pulse intervals p. 72 May 31
Phototransistor regulates illumination intensity p. 101 Oct. 4
Pnp plus npn equals unijunction transistor p. 94 Mar. 8
Precise 6-volt input triggers circuit p. 80 July 12
Pulse frequency measured by photoconductor and scopes p. 77 June 28
Pulse generator circuit doubles as modulator p. 91 Apr. 19
Pulse width converted to pulse sequence p. 86 Feb. 22
Pulse generator controls rise, fall time independently p. 98 Sept. 20
Pulses with variable mark-to-space-ratio p. 78 July 12
Reduced loading improves accuracy of cascaded pots p. 110 Nov. 15
Remotely tuned crystal filter eliminates tuned transformer p. 113 Nov. 15
R-f switching matrix cuts out crosstalk p. 67 Nov. 1
Rise time adjustment independent of fall time p. 76 Jan. 25
Sawtooth generator uses FET as constant current source p. 87 Sept. 6
Scr monitors power failure p. 63 July 26
Scr multivibrator switches reliability p. 95 Mar. 8
Scr's regulate a-c line voltage p. 61 Feb. 8
Scr ring-counter switches up or down p. 84 Sept. 6
Scr switch turns off with reverse bias p. 88 Apr. 5
Sharp discrimination of voltage differences p. 97 Sept. 20
Short-circuit protection consumes little power p. 68 Nov. 1
Simple circuit increases measurement accuracy p. 69 Nov. 1
Simple circuit tunes audio amplifier p. 84 Mar. 22
Simple multivibrator operates at 5 Mc p. 86 Aug. 23
Slow sweep generator controls camera shutter p. 82 Aug. 9
10,000 volt d-c latching relay achieved with reed switch p. 64 Nov. 29
Timing circuits control relays p. 85 Mar. 22
Transistor circuit pulses 1,000 volts p. 86 Sept. 6
Transistor increases multiplier phototube sensitivity p. 83 Aug. 9
Transistor switch passes current both ways p. 79 Jan. 11
Triangle generator adjusts output slopes and peaks p. 85 June 14
Triangular waveforms have 1% linearity p. 86 Apr. 5
Tunnel diode sensor protects regulator from short circuit p. 75 Dec. 13
Two transistors simulate high-current tunnel diode p. 63 Feb. 8
Unijunction transistor latches relay with short pulses p. 62 May 3
Unijunction transistor turns off latching relay p. 109 Nov. 15
Variable damper impedance improves tv scan linearity p. 90 Oct. 18
Zener diode protects backward wave oscillator p. 65 Nov. 29
Zero-crossing detector provides fast sync pulses p. 91 Apr. 19

## I

### INDUSTRIAL ELECTRONICS

After a lull, numerical control is in demand p. 106 Dec. 13
Computer trio runs the works at big British steel mill p. 80 Jan. 25
Computers for the electric utility industry p. 124 Apr. 19
From war gear to coal mines p. 93 Mar. 22
Light pulse system shrinks high-voltage protection device p. 71 May 17
Manual process control makes way for computers p. 110 Dec. 13
Picture looks better for closed-circuit television, The p. 70 Nov. 1
Powerful scr's, connected in parallel control industry's biggest machinery p. 110 Oct. 4
Regulating bias on a ship's hull p. 84 Aug. 9
Scr's break the frequency barrier p. 88 Sept. 6
Who's on the right track? p. 71 July 26

### INSTRUMENTS

Dark side of the laser, The p. 93 Apr. 19
Digital system continuously converts transducer into meaningful units p. 102 Mar. 8
FET performs well in balancing act p. 88 Sept. 20
Infrared fault-finder pinpoints defects in multilayer boards p. 96 Nov. 29
Measure it, but don't touch p. 65 Aug. 23
Measurement of stored charge in diode clearly defines switching speed p. 84 June 28
Step by step to a linear frequency sweep p. 66 July 26
Stress-sensitive integrated circuits p. 81 July 12
Television's toughest challenge p. 80 May 17
Transmitters towed through air test antenna's radiation pattern p. 96 Oct. 18
Two ways to measure distortion p. 80 Oct. 4
Variable persistence increases oscilloscope's versatility p. 66 Nov. 29
Wideband tape-recorder users claim obsolete standards impede technology p. 90 Jan. 25

## M

### MAGNETICS

Solid state multipliers for servosystems p. 120 Nov. 15

### MANUFACTURING

Aluminum bonding is key to 40-watt microcircuits p. 98 Aug. 23
Better bonding methods improve hybrid circuits p. 86 Mar. 22
Chips are down in new way to build large micro-systems p. 102 Oct. 4
Crossbred technology automates production of hybrid microcircuits p. 66 June 28
Designing transmission lines into multilayer circuit boards p. 90 Nov. 1
Dip soldering in miniature—a new way to assemble modules p. 94 May 31
Endless belt process makes assembly flexible p. 95 July 12
Ferris wheel programs insertion of components p. 108 Feb. 22
Flat disks reduce the cost of making cathode-ray tubes p. 113 Apr. 5
For low-cost flatpacks: remove the wires, put circuits in glass p. 99 July 12
Infrared fault-finder pinpoints defects in multilayer boards p. 96 Nov. 29
Japanese technology, the new push for technical leadership p. 77 Dec. 13
Laminates and cribbage boards connect integrated circuits p. 67 Feb. 8
New leads and potting mate flatpacks and cord-wood parts p. 96 July 12
New masking techniques for micropower transistors p. 76 Feb. 22
Oxide-poisoning problem solved by hole in grid cup p. 107 Feb. 22
Packaging revolution, The, Part I: Form and function interact p. 72 Oct. 18
Packaging revolution, The, Part II: Design and manufacturing overlap p. 75 Nov. 1
Packaging revolution, The, Part III: Computers design the layout p. 88 Nov. 1
Packaging revolution, The, Part IV: Bigger, better multilayer boards p. 90 Nov. 29
Paper path shortcut to mass trimming job p. 98 Sept. 6
Pieces of plastic keep components clear of board p. 97 Aug. 9
Small parts are aligned and assembled by vibration p. 106 Feb. 22
'Sniffer' removes solder from board p. 114 Apr. 5
Special electrode shapes solve welding problems p. 98 Aug. 9
Through the looking glass to bond semiconductor chips p. 100 Sept. 6
Two-step method simplifies hybrid-circuit assembly p. 99 Sept. 6

### MARKETS

Changing face of the West, The p. 60 Aug. 9
Computers for the electric utility industry p. 124 Apr. 19
Cramming more components onto integrated circuits p. 114 Apr. 19
Electronic market in 1965 p. 87 Jan. 11
European electronic markets 1966 p. 81 Dec. 27
Expanding market, The p. 96 Oct. 4
First 35 years of Electronics, The p. 100 Apr. 19
Forward look at electronics, A p. 106 Apr. 19
Japanese technology, the new push for technical leadership p. 77 Dec. 13
Light on the laser's future p. 119 Apr. 19
More and faster communications p. 122 Apr. 19
Research for space enters the electronics age p. 117 Apr. 19
When you're second, you try harder p. 81 Dec. 13
Wonderland for the consumer, A p. 109 Apr. 19

### MEASUREMENTS

Adding force to integrated circuits p. 72 July 12
Automatic test equipment: a million-dollar 'screwdriver' p. 88 Aug. 23
Detector circuit measures phase and amplitude p. 84 June 14
Dark side of the laser, The p. 93 Apr. 19
Digital system continuously converts transducer into meaningful units p. 102 Mar. 8
FET circuit stores light measurement p. 66 Nov. 1
FET performs well in balancing act p. 88 Sept. 20
Measure it, but don't touch p. 65 Aug. 23
Measurement of stored charge in diode clearly defines switching speed p. 84 June 28
Pulse frequency measured by photoconductor and scopes p. 77 June 28
Shortcut to calculating the Q p. 85 July 12
Simple circuit increases measurement accuracy p. 69 Nov. 1
Step by step to a linear frequency sweep p. 66 July 26
Transmitters towed through air test antenna's radiation pattern p. 96 Oct. 18
Two ways to measure distortion p. 80 Oct. 4
Variable persistence increases oscilloscope's versatility p. 66 Nov. 29

### MEDICAL ELECTRONICS

Bioengineering: a new discipline p. 111 June 14
Dark side of the laser, The p. 93 Apr. 19
Electronic detours of broken nerve paths p. 110 Sept. 20
Physical exam in orbit p. 99 Apr. 5
Special world of biotelemetry design, The p. 89 June 28

### MICROELECTRONICS

Adding force to integrated circuits p. 72 July 12
Aluminum bonding is key to 40-watt microcircuits p. 98 Aug. 23
Better bonding methods improve hybrid circuits p. 86 Mar. 22
Broader choice of components for silicon integrated circuits, A p 48 May 3
Chips are down in new way to build large micro-systems p. 102 Oct. 4
Cramming more components onto integrated circuits p. 114 Apr. 19
Crossbred technology automates production of hybrid microcircuits p. 66 June 28
Expanding market, The p. 96 Oct. 4
Feedback: perils and potentials in designing integrated circuits p. 67 May 31
IC's improve differential amplifiers—and vice versa p. 75 Aug. 9
Japan seeks its own route to improved IC techniques p. 90 Dec. 13
Making light of the noise problem p. 52 July 26
Monkeys and microelectronics p. 90 Feb. 22
MOS integrated circuits save space and money p. 84 Oct. 4
Off-the-shelf ic's in timer p. 70 Dec. 13
Packaging revolution, The, Part I: form and function interact p. 72 Oct. 18
Six possible routes to noninductive tuned circuitry p. 114 Nov. 15
Stress-sensitive integrated circuits p. 81 July 12
Thin-film capacitance elements: which is best for your purpose p. 67 Jan. 25
Through the looking glass to bond semiconductor chips p. 100 Sept. 6
'Tuning forks' sound a hopeful note p. 84 Sept. 20

### MICROWAVES

Bidding for world leadership in solid state microwave gear p. 99 Dec. 13
Continuously variable delay line for frequencies below 100 Mc. p. 73 May 31
Electronically tuned hybrid notch filter p. 92 Mar. 8

Foil and styrofoam polarize radar beam p. 75 May 31
Measure it, but don't touch p. 65 Aug. 23
New look at coaxial cavities for varactor multipliers, A p. 56 May 17
Phasing unwanted images out of microwave receivers p. 89 July 12
Selecting the right diode for r-f switching circuits p. 70 Mar. 22

MILITARY ELECTRONICS

Army lays the groundwork for satellite communications p. 86 May 31
Automatic test equipment: a million-dollar 'screwdriver' p. 88 Aug. 23
Data dots identify aerial photos p. 106 Sept. 20
Designing against radiation p. 70 Jan. 11
Detonators that tune out stray r-f p. 76 May 31
Finally, the armed forces get solid state communications p. 63 May 3
Just in case . . . p. 94 Apr. 5
Low light tv sees in the dark better than the human eye p. 78 June 28
Modernizing the missile range: Part I p. 94 Feb. 22
Modernizing the missile range: Part II p. 108 Mar. 8
Navigational satellites: beacons for ships and planes p. 79 Feb. 8

R

RADAR

New target for radar: sharper vision with optics p. 58 Dec. 27
Step by step to a linear frequency sweep p. 66 July 26

S

SOLID-STATE ELECTRONICS

Adding force to integrated circuits p. 72 July 12
Bidding for world leadership in solid state microwave gear p. 99 Dec. 13
Broader choice of components for silicon integrated circuits, A p. 48 May 3
Combing the field for ways to match overlay's performance Part III p. 82 Aug. 23
Controlling scr firing angle regulates d-c load voltage p. 80 Aug. 9
Cramming more components onto integrated circuits p. 114 Apr. 19
Diodes protect meter from overloads p. 85 Sept. 6
Expanding market, The p. 96 Oct. 4
Feedback: perils and potentials in designing integrated circuits p. 67 May 31
FET detects alpha particles better and more precisely p. 64 Feb. 8
FET in bridge circuit gates a 300-kc signal p. 60 May 3
FET performs well in balancing act p. 88 Sept. 20
Good teamwork from scr's p. 60 Aug. 23
IC's improve differential amplifiers—and vice versa p. 75 Aug. 9
Matching gate potential to FET pinchoff voltage p. 81 Aug. 9
Measurement of stored charge in diode clearly defines switching speed p. 84 June 28
MOS integrated circuits save space and money p. 84 Oct. 4
New masking techniques for micropower transistors p. 76 Feb. 22
Nonreactive filter converts triangular waves to sines p. 96 Mar. 8
Now, new unijunction geometries p. 93 June 14
Overlay transistor, new geometry boosts power, The, Part I p. 71 Aug. 23
Photodiodes control pulse intervals p. 72 May 31
Powerful scr's, connected in parallel control industry's biggest machinery p. 110 Oct. 4
Putting the overlay to work at high frequencies Part II p. 78 Aug. 23
Quick-on-the-trigger design p. 105 June 14
Scr's break the frequency barrier p. 88 Sept. 6
Scr multivibrator switches reliably p. 95 Mar. 8
Scr ring counter switches up or down p. 84 Sept. 6
Scr switch turns off with reverse bias p. 88 Apr. 5
Selecting the right diode for r-f switching circuits p. 70 Mar. 22
Simple diodes keep voltages constant p. 68 Sept. 6
Solid state stereo set built in modules, A p. 88 Aug. 9
Stable differential amplifier designed without choppers p. 73 Jan. 25
Transistor increases multiplier phototube sensitivity p. 83 Aug. 9
Transistor switch passes current both ways p. 79 Jan. 11
'Tuning forks' sound a hopeful note p. 84 Sept. 20
Unijunction device gets high marks in stringent tests of reliability p. 98 June 14
Unijunction transistor, The p. 87 June 14
What's new in semiconductor emitters and sensors p. 98 Nov. 15
When you're second, you try harder p. 81 Dec. 13
Zener diode protects backward wave oscillator p. 65 Nov. 29

SPACE ELECTRONICS

Capsule is no isolation booth, The p. 88 May 3
Designing against radiation p. 70 Jan. 11
Gemini's electronic 'firsts' p. 71 May 3
Just in case . . . p. 94 Apr. 5
Physical exam in orbit p. 99 Apr. 5
Project Gemini: giant step on a stairway to the moon p. 89 Apr. 5
Navigational satellites: beacons for ships and planes p. 79 Feb. 8
